

# Asilbek Mirolimov

## Backend Developer

It's been almost 3 years since I started programming. I learned the basics mostly from online courses, YouTube, Udemy, Mohirdev and other websites. I worked as an apprentice and intern for about 1 year and created many personal projects. Later, I worked as a tutor and mentor at the learning center. I write parts of the backend API in Django and have created telegram bots using Aiogram. I want to continue my career and challenge myself by taking on new challenges and solving problems. I can get along well with new colleagues, I am good at communication and soft skills. I will be happy to work together if the values of the company I want to join match me!

## Contact

### Phone

+998 90 979 34 50

### Email

asilbekmirolimov@gmail.com

### Address

M. Ulugbek district, Tashkent

## Education

2020-2024

**Tashkent University of  
Informational Technologies**  
Software Engineering faculty

## Expertise

- Python, C++, HTML, CSS
- Django, DRF, Aiogram, FastApi, Flask
- MySQL, PostgreSQL, SQLite
- Swagger, Docker, Redis
- Windows, Linux
- GitHub, GitLab

## Language

English - IELTS 6, B2

Russian - B1

## Experience

### 2021-2022

ZK LLC | Chilanzar d-t, Chilanzor 1 street, quarter, 4

#### Programmer Intern

I learned a lot in this company, such as soft skills and Python from basics to these Skills: Django REST Framework, Swagger API, PostgreSQL, Django.

My tasks:

- Some API parts for the Warehouse project,
- Fixing bugs and releasing unfinished APIs
- Test writing

### 2023(march) - current

35A Beruniy street, Toshkent

#### Tutor, Mentor

Developing programming skills as a tutor or mentor in the IT sphere is an ongoing process that not only benefits the individuals themselves but also greatly impacts the quality of education and guidance they can provide to their students. Below are the skills I have gained as a tutor and mentor:

- Stay Updated
- Problem-Solving Skills
- Creating Learning Resources
- Continuous Learning
- Teaching and Mentoring

#### Projects

Although I have little experience, I have implemented several large and small projects. For example, the telegram bot is mainly through aiogram, the website and APIs are in Python Django.

- Several small bots, translator, weather, fast-food order, etc.
- API for LMS, Metsenat, Barber shop, Repitition test, ToDO app projects
- Bugfixing and adding endpoints for warehouse, eCommerce projects
